

902S01097: Verified prediction line of evidence for Field-measured specific conductivity ($\mu\text{S}/\text{cm}$)

Do the data support the prediction that the abundance of sensitive taxa will be lower and tolerant taxa will be higher than observed at comparator sites with better biology?

Score = Tolerant Taxa (-1), Sensitive Taxa (1)
Number of samples with better biology (n=108); better biology and not degraded (n=108)
Samples with better biology have CSCI > 1.05
